Future programmers!

Twenty Year 9 and 10 pupils took part in a programming activity sponsored by Glyndwr University and Technocamps at Argoed High School.

The Technocamps programme aims to inspire, motivate and engage people with computational thinking and promote computer science as underpinning all aspects of modern society.

Pupils learned how to use the Python programming language and developed some interesting programs, including using turtle.

Pupils were challenged throughout the day and all stepped up to the tasks set by the trainers. Miss Price (Head of IT and Computing) said "It was a high end workshop for our pupils, they were challenged throughout and really worked hard. It was very inspiring to work with professionals who are so passionate about this area of work. A truly great learning experience!"
